Unity Game Developer with 1+ years of professional experience developing commercially released 2D games. Expertise in gameplay programming, AI systems, multiplayer architecture, and performance optimization. Proven ability to deliver production-ready features in agile environments.

Work Experience

Webhibe Technologies

Kolkata, West Bengal
02/2025 - 06/2026

Junior Unity Developer

- Iwokrama Game - Developed complete Snake & Ladder implementation with AI and multiplayer modes, including game rule logic and progression tracking. Created Word Search gameplay system with procedural puzzle generation and intuitive interaction mechanics optimized for educational users.
- Ludo - Architected complete gameplay system including turn management, dice mechanics, pawn movement validation, and rule enforcement for 2, 3, and 4-player matches.
- PlayNest - Developed three distinct mini-games: MatchLink (pattern recognition), PixelColor (color-matching mechanics), and MathGame (arithmetic challenges). Each game features comprehensive gameplay logic, progression systems, and scoring mechanics.

Education

Red Apple Learning

kolkata, West Bengal
03/2025 - 01/2026

Diploma, Game Development | GPA: 8

IGNOU

Kolkata, West Bengal
07/2025 - Present

Bachelor in Computer Application

Skills

Game Engine: Unity

Core Competencies: Gameplay Programming, AI Systems, Object Oriented Design, Multiplayer

Technologies:

Coroutines, Scriptable Objects, UI Systems, Git Version Control, Performance Profiling & Optimization

Soft Skills: Agile Development, Cross-functional Collaboration, Rapid Prototyping, Problem-Solving

Projects

Neon Edge

Designed and developed a deck-building card battler featuring AI-driven enemy decision-making, ScriptableObject-based card systems, animated combat flows, ability trees, and reusable gameplay architecture. Demonstrates expertise in complex game systems design and maintainable code architecture.

The Living Hollow (In Development)

Architected complete gameplay systems for first-person psychological horror experience. Implemented exploration mechanics, puzzle-solving systems, enemy AI behaviors, intuitive interaction systems, progression mechanics, dynamic flashlight systems, and atmospheric horror design. Demonstrates expertise in immersive gameplay design and systems integration.

Snake3D

Modern 3D interpretation of the classic Snake game featuring procedural food spawning, progressive difficulty scaling, robust game state management, persistent high score system, and smooth camera dynamics. Showcases 3D gameplay programming expertise.

StreetCar

2D endless runner with dynamic obstacle avoidance, collectible systems, progressive difficulty scaling, and score-based progression. Demonstrates foundation in core gameplay programming before transitioning to professional development.
